

■ TAG2000

➔ Overhead line voltage detector, Multiple threshold

➔ USE :

For overhead lines only, in all weathers.
These multiple threshold devices can combine up to 3 devices in 1!

➔ TECHNICAL SPECIFICATIONS :

Thanks to their calculator, these versions can replace up to 3 voltage detectors with just one device with stepped settings (the 3 voltage ranges chosen must nevertheless be sufficiently spaced apart).

The detector lights up one, two or three red indicator LEDs, depending on the voltage range detected.

The settings are compliant with the safety recommendations in the IEC standard.

➔ TABLE LEGEND :

Other voltage ranges and frequencies possible (16Hz 2/3, 60Hz), please specify when ordering.

Ref.	Voltage range	Frequency	Description
2K0GB011066C	3 stepped settings: 11 kV, 22-33kV, 66 kV	50 Hz	3 range voltage detector, supplied in metal carrying case with 2 electrodes
