

General Specifications

EJA110E Differential Pressure Transmitter

GS 01C31B01-01EN

The high performance differential pressure transmitter EJA110E features single crystal silicon resonant sensor and is suitable to measure liquid, gas, or steam flow as well as liquid level, density and pressure. EJA110E outputs a 4 to 20 mA DC signal corresponding to the measured differential pressure. Its accurate and stable sensor can also measure the static pressure which can be shown on the integral indicator or remotely monitored via BRAIN or HART communications. Other key features include quick response, remote set-up using communications and self-diagnostics. FOUNDATION Fieldbus, PROFIBUS PA and 1 to 5 V DC with HART (Low Power) protocol types are also available. All EJA-E series models in their standard configuration, with the exception of the Fieldbus, PROFIBUS and Low Power types, are certified as complying with SIL 2 for safety requirement.

■ STANDARD SPECIFICATIONS

Refer to GS 01C31T02-01EN for Fieldbus communication type and GS 01C31T04-01EN for PROFIBUS PA communication type for the items marked with “∅.”

● Total Probable Error (M capsule)

±0.20% of Span @1:1 to 5:1 Rangedown
 Total probable error, known as a measure of the total performance of the transmitters under the condition of fixed line pressure.

$$\text{Total Probable Error} = \pm \sqrt{E_1^2 + E_2^2 + E_3^2}$$

- E1: Reference Accuracy of Calibrated Span
- E2: Ambient Temperature Effects per 28°C change
- E3: Static Span Effects per 6.9 MPa change

● Total Accuracy (M capsule)

±0.17% of Span @1:1 Rangedown
 ±0.33% of Span @ 5:1 Rangedown
 Total accuracy is a comprehensive measure of transmitter total performance, covering all major factors in actual installation, that cause errors in measurement.

As a standard measure, YOKOGAWA uses this to evaluate transmitter performance.

$$\text{Total Accuracy} = \pm \sqrt{E_1^2 + E_2^2 + (E_3 + E_4)^2 + E_5^2}$$

- E1: Reference Accuracy of Calibrated Span
- E2: Ambient Temperature Effects per 28°C change
- E3: Static Span Effects per 6.9 MPa change
- E4: Static Zero Effects per 6.9 MPa change
- E5: Overpressure Effects upto overpressure 16MPa

Not only a day-to-day changes in temperature can affect the measurement and lead to unnoticed errors; fluctuation of line pressure, incorrect operation of three/five valve manifold leading to over-pressure events, and other phenomena can have the similar result. Total Accuracy factors in such changes and errors and provides much comprehensive and practical determination of how a transmitter will perform under actual plant operation.

(For monitoring via communication or on indicator. Includes terminal-based linearity, hysteresis, and repeatability)**

Range

Upper Range Value and Lower Range Value of the static pressure can be set in the range between 0 and Maximum Working Pressure(MWP). The upper range value must be greater than the lower range value. Minimum setting span is 0.5 MPa(73 psi). Measuring either the pressure of high pressure side or low pressure side is user-selectable.

Accuracy

Absolute Pressure

Less than 1 MPa: $\pm 0.5\% \times (1 \text{ MPa}/\text{span})$ of span

Gauge Pressure Reference

Gauge pressure reference is 1013 hPa (1 atm)

Note: Gauge pressure variable is based on the above fixed reference and thus subject to be affected by the change of atmospheric pressure.

*1: HART 5 or HART 7 is selectable. Specify upon ordering.

*2: ⚠ Users must consider the characteristics of selected wetted parts material and the influence of process fluids. The use of inappropriate materials can result in the leakage of corrosive process fluids and cause injury to personnel and/or damage to plant facilities. It is also possible that the diaphragm itself can be damaged and that material from the broken diaphragm and the fill fluid can contaminate the user's process fluids.

Be very careful with highly corrosive process fluids such as hydrochloric acid, sulfuric acid, hydrogen sulfide, sodium hypochlorite, and high-temperature steam (150°C [302°F] or above). Contact Yokogawa for detailed information of the wetted parts material.

6. TAG NO (if required)

Specified characters (up to 16 characters for BRAIN, 22 characters for HART, and 16 characters for /N4 tag) are engraved on the stainless steel tag plate fixed on the housing.
7. SOFTWARE TAG (for HART only. if required)

Specified characters (up to 32 characters) are set as “Tag” (the first 8 characters) and “Long tag”^{*1} (32 characters) in the amplifier memory. Use alphanumeric capital letters.
When the “SOFTWARE TAG” is not specified, specified “TAG NO” is set as “Tag” (the first 8 characters) and “Long tag”^{*1} (22 characters) in the amplifier memory.
