Product Description

OPUS Inverter Systems are robust, free convection cooled, N+1 redundant DC to AC power conversion solutions for critical infrastructure applications such as transmission and distribution substations, process industries, railway signalling and substations and telecommunications.

OPUS Inverter Systems consist of inverter modules, static bypass, manual bypass and AC load distribution. System is configurable to meet the requirements of the application. System is managed by OPUS VIDI controller and local UIF display. Remote monitoring protocols such as Ethernet TCP/IP, Modbus TCP/IP, SCADA IEC61850, SNMP and RS-232 are supported.

OC2066 2000x600x600mm standard cabinet systems deliver maximum 16.8kVA/16.8kW with static bypass and manual bypass. System supports typical battery voltages 24V, 48V, 60V, 110V, 125V and 220V. Output voltage is adjustable 200-240VAC 50-60Hz. As an option system can be equipped with two DC inputs A + B to support supply of double powered critical applications. Quantity of Inverter modules and load distribution fuses are configurable to match with requirements of the application.

Features

- Modularity, n+1 redundancy
- Configurable on-line/off-line default supply with bypass and manual bypass modules
- Efficiency on-line 90%, off-line >99%
- Full integration to OPUS DC power systems
- Convection cooling or redundant fans, air flow bottom to top fan
- Nominal Input voltages 24VDC, 48-60VDC, 110-125VDC, 220 VDC
- Flexible design with full front cabling
- Configurable load distribution
- Options: A+B double DC input 3-phase systems
- Safety:
Cabinet: EN61439-1, EN61439-2
Inverters: EN 62368-1
- EMC:
Cabinet: EN61439-1, EN61439-2
Inverters: EN 61000-6-1 / -2 / -3 / -4
