The **RIEGL miniVUX-1UAV** is an extremely lightweight airborne laser scanner, designed specifically for integration with UAS/UAV/RPAS.

The small and sophisticated design of the stable aluminum housing offers various integration possibilities with platforms that offer restricted space or payload capabilities. The 360° field of view allows complete acquisition of the environment.

An easy-to-remove SD card for data storage, and/or the option for streaming the scan data via LAN-TCP/IP interface, in combination with the modest power consumption of the scanner, enable straight-forward integration with most UAS/UAV/RPAS types.

The **RIEGL miniVUX-1UAV** makes use of **RIEGL's** unique Waveform-LiDAR technology, allowing echo digitization and online waveform processing. Multi-target resolution is the basis for penetrating even dense foliage. As a further special feature, the wavelength is optimized for the measurement of snowy and icy terrain.

In addition to the stand-alone version of the miniVUX-1UAV, **RIEGL** also offers fully-integrated system solutions.

Typical applications include

- **Agriculture & Forestry**
- **Glacier and Snowfield Mapping**
- **Archeology and Cultural Heritage Documentation**
- **Construction-Site Monitoring**
- **Landslide Monitoring**

Maximum Measurement Range vs. Target Reflectance *RIEGL* miniVUX®-1UAV

Operating Flight Altitude AGL given for the following conditions:
FOV of +/-45°, target size ≥ laser footprint, average ambient brightness

Example: miniVUX-1UAV at 100,000 pulses/second, speed = 4 m/s,
range to target = 100 m, resulting point density ~ 40 pts/m²

RIEGL miniVUX-SYS System Integration Options

Besides of the stand-alone miniVUX-1UAV LiDAR engine, *RIEGL* offers also system solutions, combining the miniVUX-1UAV with IMU/GNSS systems of different performance and of different form factors as well as optional RGB camera systems. Additionally, a special add-on to the miniVUX-SYS allows for straight forward integration with your multi-rotor UAV, e.g. a DJI Matrice M600 / M300 RTK.

Laser Product Classification

Class 1 Laser Product according to IEC 60825-1:2014

The following clause applies for instruments delivered into the United States: Complies with 21 CFR 1040.10 and 1040.11 except for conformance with IEC 60825-1 Ed.3., as described in Laser Notice No. 56, dated May 8, 2019.

Range Measurement Performance

Measuring Principle

time of flight measurement, echo signal digitization, online waveform processing

Laser Pulse Repetition Rate PRR ¹⁾	100 kHz
Max. Measuring Range ²⁾	
natural targets $\rho \geq 20\%$	170 m
natural targets $\rho \geq 60\%$	290 m
natural targets $\rho \geq 80\%$	330 m
Typ. Operating Flight Altitude AGL ^{1) 3)}	
natural targets $\rho \geq 20\%$	100 m (330 ft)
natural targets $\rho \geq 60\%$	160 m (525 ft)
Max. Number of Targets per Pulse ⁴⁾	5

1) Rounded values.
2) Typical values for average conditions. Maximum range is specified for flat targets with size in excess of the laser beam diameter, perpendicular angle of incidence, and for atmospheric visibility of 23 km. In bright sunlight, the max. range is shorter than under overcast sky.
3) Flat terrain assumed, scan angle $\pm 45^\circ$ FOV
4) If more than one target is hit, the total laser transmitter power is split and, accordingly, the achievable range is reduced.
