## MODEL X45 DIGICOMP

### HIGH ACCURACY FOR TEST AND RESEARCH

Viatran's Model 245 and 345 are our most accurate pressure transducer for industrial test and research applications. The 245/345 measures pressure from 3 PSI to 5000 PSI with standard accuracy of  $\leq \pm 0.06\%$  FSO.

To achieve high static accuracy and low temperature errors, Viatran uses a state-of-the-art ASIC with an EEPROM to store corrective coefficients. Each unit is individually calibrated in a computer controlled environmental chamber.

Digitally controlled programmable gain amplifier (PGA) based electronics allows us to maintain a deep temperature compensation in the range of -40°F to +185°F and linearize the output signal down to 0.06% FSO or less without sacrificing the 1-3 mS response time of the product.

### COMPACT SIZE FOR LIMITED SPACE APPLICATION

The compact size of the 245/345 allows more transmitters to fit into a smaller space so that more pressure points can be measured. The use of surface mount technology (SMT) allows this complex circuitry to be incorporated into a small package. Also included is an internal calibration signal circuit. This feature allows calibration of the transmitter without an external pressure source and minimizes the need to send the transmitter to a metrology lab.

### CIRCUIT PROTECTION

All welded construction of the product's body provides good EMC performance and the RFI protection circuit makes this product the most suitable for accurate measurements in an electrically noisy environment.

Viatran's Models 245 and 345 are among our most accurate pressure transmitters for industrial test and research applications. The "45" Series measures gage and absolute pressures from 0-5 PSI to 5000K PSI with standard accuracy of  $\leq \pm 0.06\%$  FSO
